HOW D30® MATERIALS WORK

D30® has a unique molecular structure; in standard conditions, the molecules flow freely allowing the material to remain soft and flexible, but on impact, they lock together to absorb and dissipate the impact energy and reduce the transmitted force. The molecules instantly return to their flexible state. D30® is strain-rate sensitive, which means the stronger the impact, the more the molecules react, providing great protection.

CCM uses D30® smart material in key areas that require the highest degree of protection and comfort due to its many excellent properties. D30® materials allow CCM products to remain lightweight and manage various types of impacts often experienced in hockey.

D30®

WHAT IS D30®

D30® uses a combination of patented, patent-pending and proprietary technologies to make rate sensitive, soft, flexible materials with high shock absorbing properties. It offers the thinnest and most advanced protection against impact. D30® materials are made using a combination of advanced polymer chemistry and cutting-edge design. The materials are soft and flexible, with no compromise on comfort, but react differently when force is applied. D30® absorbs and dissipates energy during an impact, reducing the amount of force transmitted to your body compared to standard foams.
